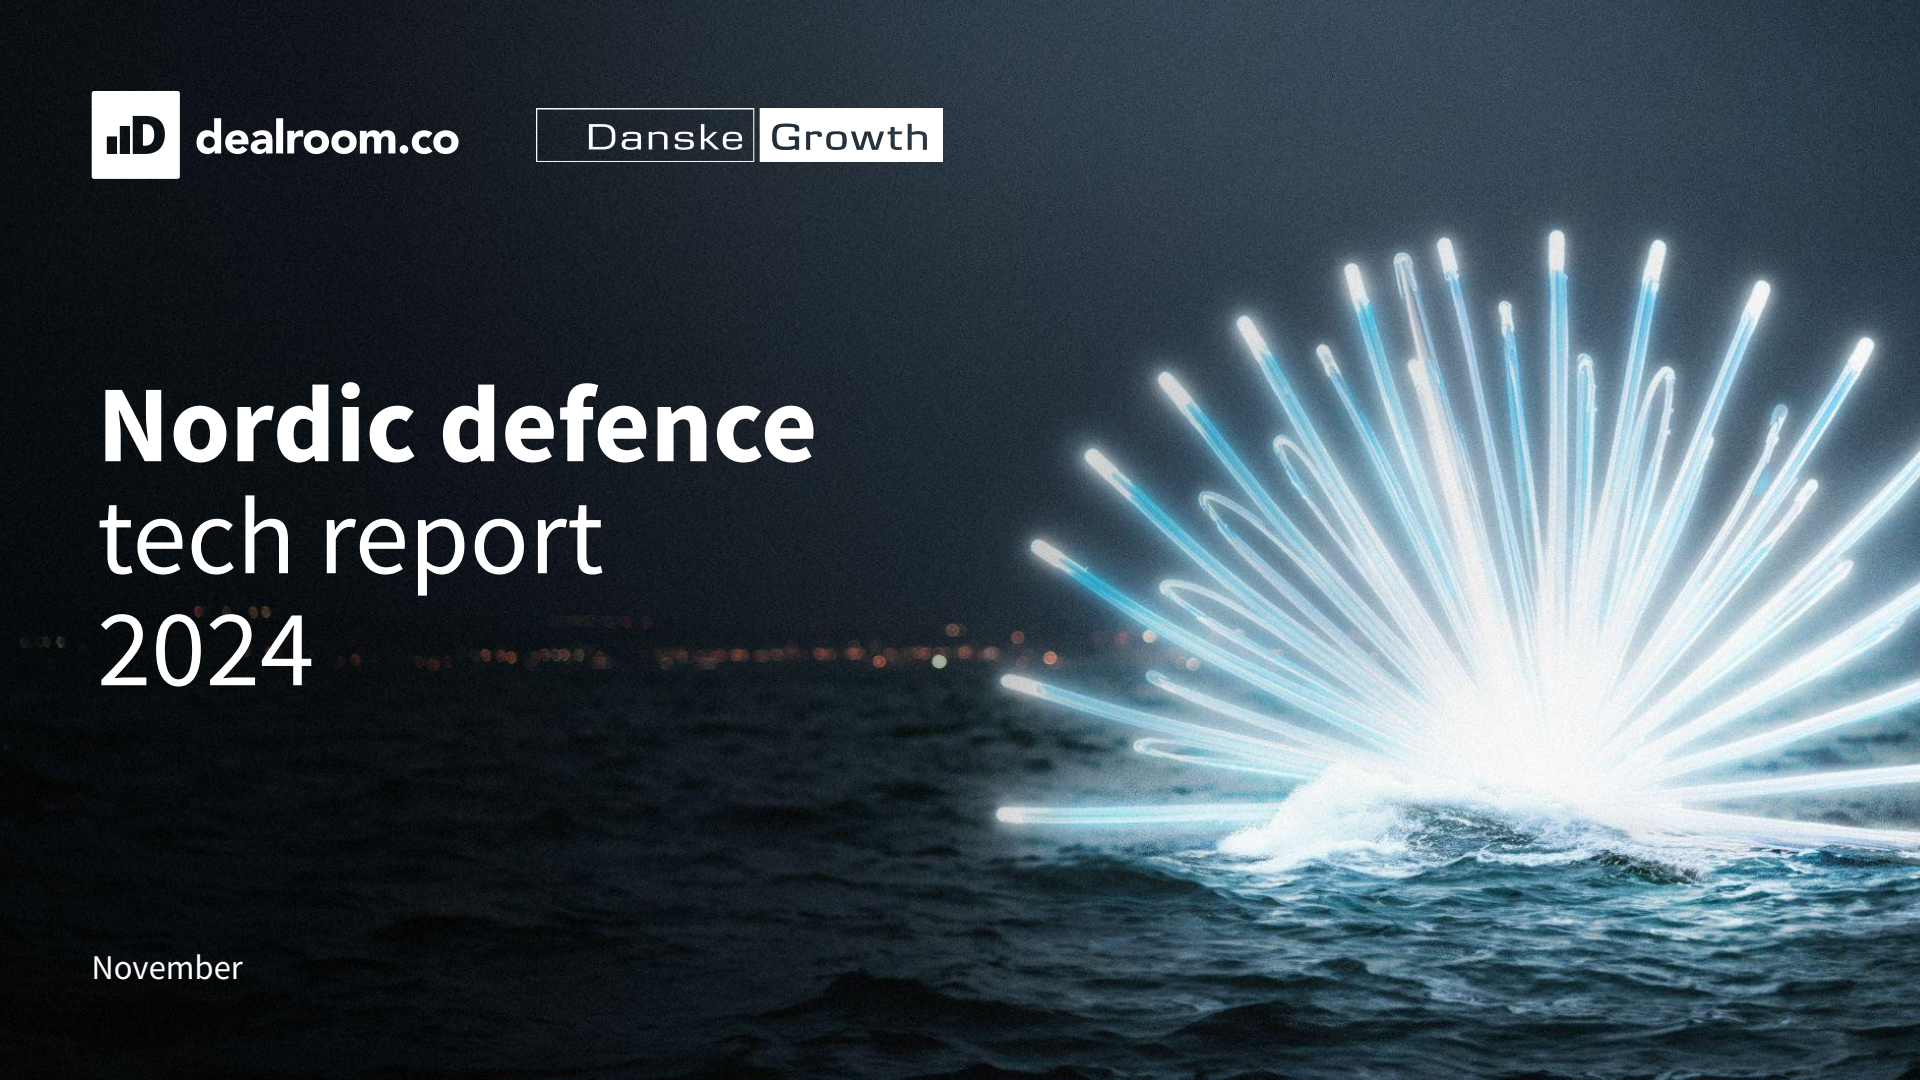
Nordic defence tech report 2024



November

Introduction

Growing geopolitical tensions and rapid tech advancements underscore the importance of dual-use technologies in shaping Europe's and the Nordics' defence landscapes. These technologies, spanning civilian and military applications, are increasingly critical for national security, economic resilience, and technological leadership.

The global defence market is projected to reach **$2.6 trillion by 2030,** with **quantum computing and space tech** playing key roles. Quantum promises breakthroughs in encryption and cybersecurity, while space technologies are essential for intelligence and surveillance. These innovations drive progress not only in defence but also in civilian sectors like telecommunications, energy, and healthcare.

The recent Nordic Defence Conference emphasized the urgency of investing in dual-use tech to sustain competitive advantage in both civil and defence realms.

This report delves into dual-use tech investment across the Nordics and Europe, exploring how innovations in quantum and space tech are reshaping the future of defence and beyond.

Key Figures

$1B+
VC investment since 2019

$3.7B
Enterprise Value of Defence & Dual-use startups

76%
Share of Defence & Dual Tech VC funding going to Space and Quantum since 2019

130+
Defence & Dual-use startups in the Nordics

Malta	2.1	3.8	0.4

Nordic countries announced ramp-up of defence plans

Denmark plans to raise defence spending to 2.4% of GDP in 2024, exceeding NATO's 2% target. This $26 billion, decade-long plan includes major investments in cyber defence, military intelligence, and conscription to modernize Denmark's military and sustain a 2% spending level by 2030.

Sweden, the latest Nordic country to join NATO, aims to reach 2.6% of GDP by 2030. Already, Sweden has doubled its defence budget since 2020, allocating around $11 billion in 2024 to meet NATO's 2% GDP target.

Norway announced a "historic boost" in defence spending, with plans to double its budget over the next 12 years by adding €51 billion. This increase will support an expanded industrial base and armed forces, helping Norway meet NATO's 2% goal for the first time in 2024.

Finland, following NATO accession in 2023, will allocate 2.3% of GDP (around €6 billion) to defence in 2024, with a focus on reinforcing border security.

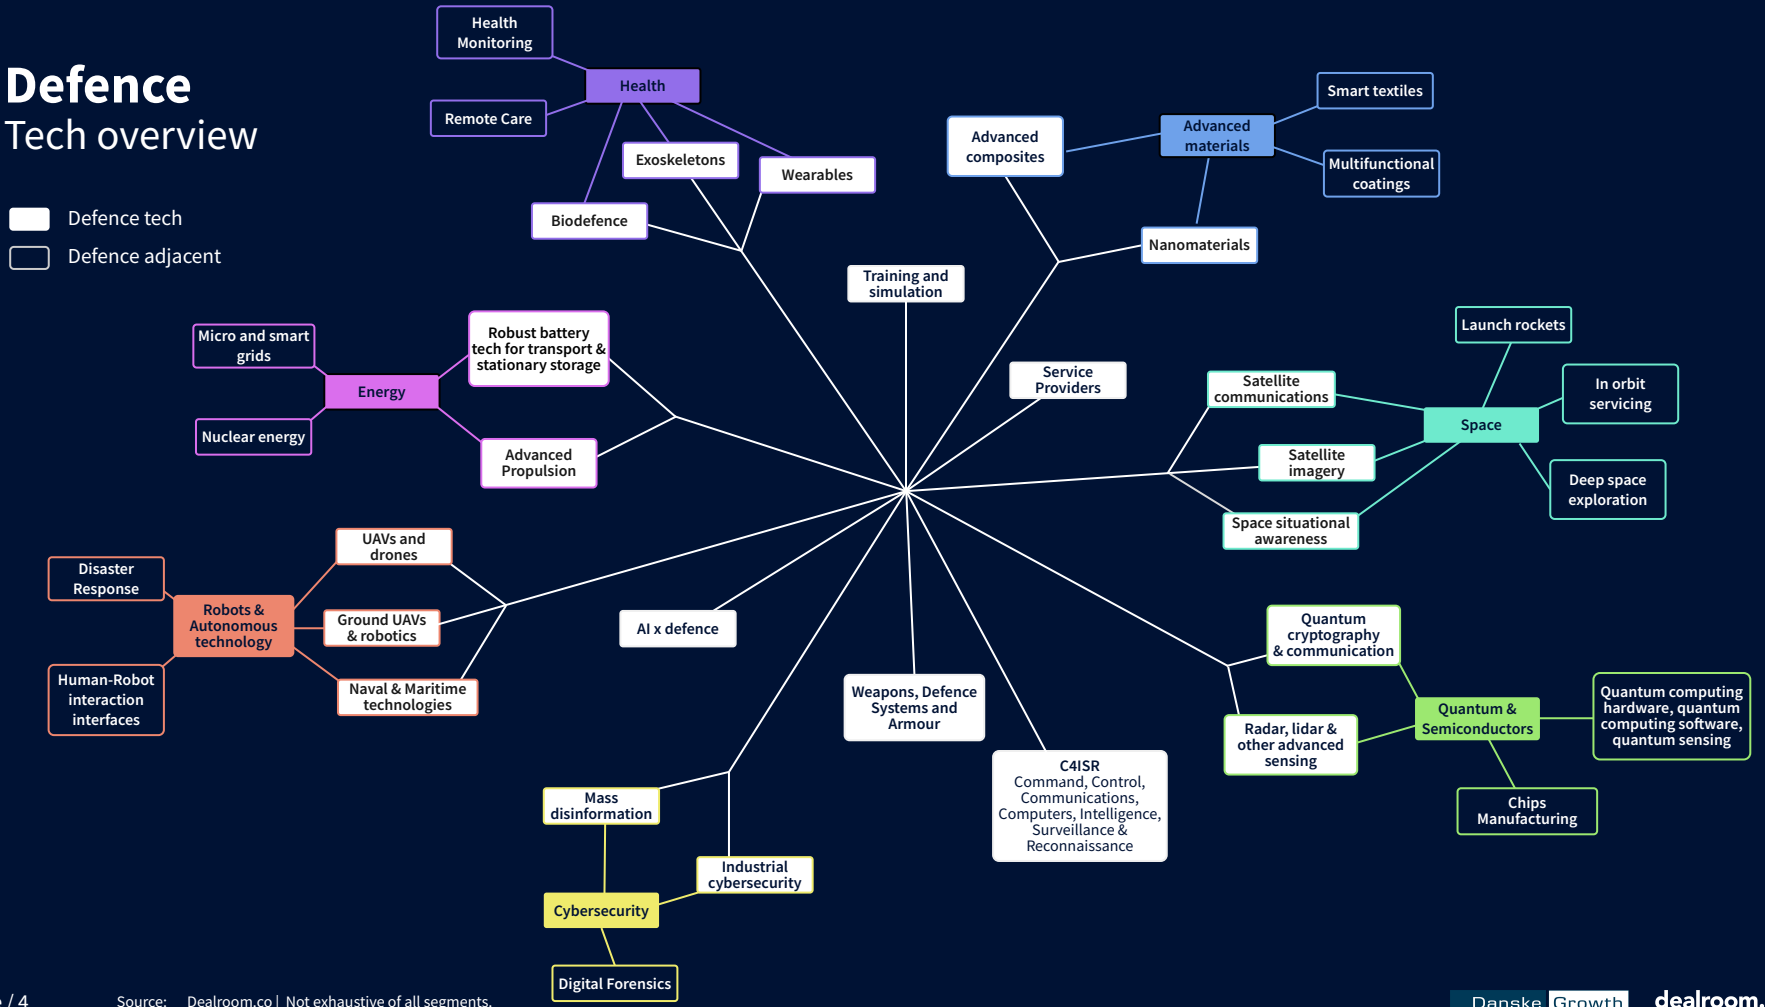
Defence
Tech overview



Source: Dealroom.co | Not exhaustive of all segments.

Defence terminology.

Dual-use tech

Any startups developing technologies, products or services with disclosed or *clear potential* application in the defence sector.

Examples: quantum technologies, space tech, etc.

Defence

Core company focus are technologies applied for military use.

Examples of Nordic startups:

MYDEFENCE · unbound autonomy · NAD NORDIC AIR DEFENCE · SKY-WATCH

Defence applications

Companies working on different segments and one application is defence.

Examples of Nordic startups:

NORDIC UNMANNED · QUADSAT · MARITIME ROBOTICS · GIM ROBOTICS · Aquila bioscience

Where are Nordics defence startups based?

Helsinki, Stockholm, Copenhagen, Aalborg, Trondheim and Oslo host most defence tech, space and quantum startups.

Finland shows a very strong centralization in Helsinki, while Denmark, Sweden and Norway have multiple hubs.

In **Denmark**, Aalborg and Copenhagen emerge as key hubs. Aalborg hosts notable activity thanks to the Aalborg University (AAU), and the presence of mature defence industry players and army outposts. Odense also shows up with its robotics hub.

In **Sweden**, Stockholm is the main hub, followed by Uppsala, Gothenburg, Luleå and Malmo & Lund.

In **Norway**, Trondheim follows Oslo to host notable activity in maritime technologies coming from offshore expertise.

Iceland is concentrated in Reykjavík.

The growing value of defence tech investments

From being a low interest area for VCs, Defence and Dual-use is recognised as a necessity and driver of rapid innovation - creating a significant shift in perception of Nordic VCs.

"Everything changed when Russia invaded Ukraine — nowadays, a significant fraction of the best founders I speak to are founding defence tech companies. This renewed interest in the space combined with the boom in AI and hardware innovation is going to change the industry for the better, very quickly."

Magnus Hambleton
Investor at byFounders

"The nature of warfare is rapidly changing, with drones and advanced, cost-effective weaponry set to play a major role in future security strategies. This shift calls for new solutions that enhance defence capabilities in a rapidly changing landscape."

Timo Ahopelto
Founding Partner at Lifeline Ventures

"Defence-focused companies attract highly committed founders, often motivated by a sense of mission to protect society. These entrepreneurs are obsessed with their mission, often putting personal stakes on the line."

Magnus Bergman
General Partner at Luminar Ventures

"We're seeing a noticeable rise in new defence tech startups seeking support, with interest and proposals coming in regularly. This marks a real change from just a few years ago, where defence was rarely a focus for emerging companies. Indicating a significant shift in the perception of defence tech investors."

Alberte Schmidt Koefoed
Investment Manager at PSV

Source: Insights from interviews carried out by Danske Growth

Nordic VCs show a clear preference for dual-use technologies that enable scalable growth across civilian and defence markets.

AI and Quantum Computing

AI and quantum computing are recognized for their transformative dual-use potential in both defence and commercial sectors.

“AI is disrupting the entire global economy right now — Defence is not going to be an exception. It is hard to overestimate how much AI will impact defence in the coming years.”

Cybersecurity

As reliance on digital infrastructure grows, the demand for robust cybersecurity becomes critical across both defence and civilian sectors.

“Cyber resilience isn’t just defence; it’s essential across sectors.”

Drones

In Ukraine, drones using general-purpose components are transforming military strategies.

“Technological advancements in drone and detection systems are enhancing drone capabilities, lowering costs, and facilitating wider adoption across both defence and civilian sectors."

Space Technology

Space technology, particularly satellite systems, plays a crucial dual-use role in both defence and civil sectors, enhancing communication, navigation, and surveillance capabilities.

“Space tech has strong dual-use relevance, especially in critical communications.”

Semiconductors and Photonics

They serve as essential building blocks for both defence and civil technologies, enabling advancements in AI and high-performance computing.

“Next-generation semiconductor designs fit naturally within defence, but have massive civil potential.”

Advanced Materials and Energy Solutions

Materials can become pivotal for innovation and efficiency across industries, including defence.

“Advanced Materials can be game changers in many areas, as an example, quantum dots enabling affordable mass production of short-wave infrared sensors"

Source: Aggregated Insights from interviews carried out by Danske Growth

There are several bottlenecks defence tech startups have to face in the Nordics and in Europe.

1 **Regulatory Hurdles:** The defence tech landscape is marked by "higher requirements in terms of regulations," which create processes that are "more time-consuming" and "cumbersome." These complexities often lead to "real locking effects" that hinder investment progress.

2 **International Expansion:** Expanding into international markets is challenging due to "confidentiality issues" and different regulations across countries. Even moving "from one country to another" can be difficult because of sovereignty concerns and varying regulations within Europe.

3 **Talent Acquisition:** Finding qualified personnel is a significant bottleneck, with one VC noting that "sometimes it's hard to recruit talent with the specialised and deep technical knowledge required for the defence tech sector."

4 **Funding Limitations:** There is a critical need for grants and public-private partnerships to create an accelerator that can support "long-term investments." Without securing funds for an accelerator that can operate for 5-10 years, "we won't see a significant transformation" in the defence tech landscape.

5 **Access to Capital:** "Governments are blocking the investment" from foreign VCs into companies deemed "critical assets." This restriction limits startups' access to European capital markets, which may not have the same financial strength as US counterparts.

6 **Procurement Complexity:** Startups face challenges with "supply requirements" when they begin to secure large government contracts. This complexity can prevent them from fulfilling essential agreements, limiting their growth potential.

Source: Insights from interviews carried out by Danske Growth

Nordic VCs acknowledge dual-tech promise, with mixed views on civilian vs. defence priority.

Most Nordic VCs prioritize a civilian-first strategy, focusing on scalability, exit potential, and market flexibility. defence is seen as an additional revenue stream and a way to accelerate growth, rather than the primary focus.

However, some VCs view a defence-first approach as advantageous, with government funding and immediate market needs offering stability in the early stages.

"Defence offers stability, but it's the civilian markets that lead with scale."

Magnus Bergman
Luminar Ventures

"Defence can provide long-term contracts, helping to mitigate risk as startups grow, gradually expand into civilian markets."

Timo Ahopelto
Lifeline Ventures

"We focus on game changing deep tech. Selling to governments for defence can provide a major business acceleration, while civilian markets drive competitiveness.

Inka Mero
Voima Ventures

"Defence applications can stabilize early growth, but it's the civil potential that ultimately drives valuation."

Paavo Raisanen
Maki.vc

"We're exploring dual-use cases, but there's hesitancy due to the ethical concerns around pure defence tech"

Nima Tisdall
Nordic Makers

A few words on our methodology.

What is a startup?

Companies designed to grow fast. Generally, such companies are VC-investable businesses. Sometimes they can become very big (e.g. $1B+ valuation). When startups are successful, they develop into scaleups (>50 people), grownups (>500 people) and result in big companies. Only companies founded since 1990 are included in this report.

Blog post: **What is a Startup?**

Industries, Segments

Dealroom's Intelligence Unit has developed a proprietary technology taxonomy that acts as a foundation and helps navigate existing and emerging technologies. We welcome suggestions and feedback at support@dealroom.co.

Blog post: **Tech taxonomy**

Dual-use tech definition

Dual-use technology startups include companies that develop products and services that can be used in both civilian and military sectors. These startups contribute with their core technologies toward enhancing national security and defence (defence applications) or advancing civilian industries like healthcare, infrastructure, and energy (civilian applications).

Venture Capital, Investors

Investment are referred to by their round labels such as Seed, Series A, B, C, … late stage, and growth equity. VC investments excludes debt or other non-equity funding, lending capital, grants and ICOs.

Buyouts, M&A, secondary rounds, and IPOs are treated as exits: excluded from funding data, but included in exit data.

Underlying Data

Dealroom's proprietary database and software aggregate data from multiple sources: harvesting public information, user-submitted data verified by Dealroom, data engineering. Data is verified and curated with an extensive manual process.

The data on which this report builds is available via **app.dealroom.co**. For more info please visit dealroom.co or contact **support@dealroom.co**.
